Profile

Senior Software Engineer experienced in building **scalable SaaS web applications and dashboards**. Strong focus on **performance optimization, reusable components, and user-centric UI/UX**, with a proven ability to convert business requirements into reliable, production-ready solutions.

WORK EXPERIENCE

08/2025 – Present
(Remote), UK

Senior Software Engineer

Pave Insights

Achievements/Tasks

- **PAVE Insight: Connected Mobility Market Intelligence Platform** - A cloud-based market intelligence platform for the connected mobility and automotive industry. PAVE Insight delivers real-time data, forecasts, and competitor benchmarking in a single dashboard, enabling teams to analyze markets, track trends, and make data-driven strategic decisions with confidence.

02/2024 – 07/2025
(Remote), Canada

Senior Frontend Developer

Phenologix

Achievements/Tasks

- **ScrumDroid** - A comprehensive organizational management system for handling attendance, asset tracking, and daily task workflows, built using ReactJS, NodeJS, SQL, and SWR.
- **HireDroid** - A feature-rich job portal built with Next.js, Node.js, Express, and SQL, enabling HR managers to post job openings and conduct interviews, professionals to apply for jobs, and company owners to create and manage their company profiles.

02/2023 – 02/2024
(Hybrid), Pakistan

MERN Stack Developer

QBatch

Achievements/Tasks

- **FabPOS – Cloud-Based Point of Sale System** A cloud-based Point of Sale (POS) web and mobile application designed to simplify retail and service operations. FabPOS enables businesses to manage sales, customers, inventory, invoicing, expenses, and staff from a single platform. It offers real-time inventory tracking, offline support, barcode scanning, reporting and analytics, and multi-device accessibility to ensure smooth daily operations and better business insights.
- **FabMedic – Digital Healthcare Management Platform** A healthcare management application designed to simplify patient care and medical record handling. FabMedic enables users to manage health records, appointments, medications, and test results while allowing secure sharing of medical data with healthcare providers. The platform improves care coordination and enhances patient engagement through a centralized, easy-to-use system.

10/2022 – 09/2023
(Onsite), Pakistan

Full Stack Engineer

DextorSol

Achievements/Tasks

- **Customer Care Center System** - An online platform designed to handle customer support for issues related to order delivery and product storage, built using FastAPI for the backend, Agenda for job scheduling, and Puppeteer for automated workflows and browser tasks.
- **Heartland Rehab** - A dedicated rehabilitation center offering personalized physical therapy and recovery programs to help individuals regain strength, mobility, and confidence. With a compassionate team of licensed therapists and modern facilities, Heartland Rehab focuses on delivering holistic care tailored to each patient's journey toward wellness.
- **AkredCenter** - A web-based accreditation management system that provides users with a secure dashboard to track, manage, and organize accreditation credentials and related compliance data in one central place. The platform allows authenticated users to log in, view their accreditation profiles, and stay updated on status, requirements, and documentation through an intuitive interface. Designed to streamline administrative workflows and improve oversight of accreditation processes.

08/2018 – 09/2022
(Onsite), Pakistan

Software Engineer

Smart A&I Solutions (PVT) Ltd.

Achievements/Tasks

- **POS (Point of Sale) System** - A full-featured web application built with the MERN stack (MongoDB, Express.js, React.js, Node.js), designed to manage every aspect of an end-to-end point of sale solution. It includes customer management, product and inventory tracking, invoicing, warehouse operations, employee directory, and a complete payroll system to streamline business operations.
- **Service Provider** - A complete B2C service platform enabling service providers to offer their skills and customers to hire them seamlessly. Built with Django DRF, ReactJS, PostgreSQL, and React Native, the system includes features such as live chat, real-time location tracking, and a robust review system, delivering a smooth experience across web and mobile platforms.
